- 非常著名的大瀑布景象壮观。

我准备去看著名的黄果树瀑布。

我看过许多景色壮丽的瀑布。

我收集著名的大瀑布照片。

世界上水量最大的瀑布是哪个？

世界上最宽的瀑布是哪个？

世界上落差最大的瀑布是哪个？

挂在半空中的巨大水幕是哪个瀑布？

[illegible]

3. 阅读并填上下面的表格：（Read and filling the information about each waterfall in the table, using Chinese dictionary for the word you don't know）

黄果树瀑布：在中国贵州省的白水河上。白水河从山区流出，到黄果树地段，河床突然断落，形成七股瀑布，夏季洪峰时汇成巨瀑，宽 81 米，落差 74 米，流量是 2000 立方米/秒。流入犀牛潭，黄果树瀑布看上去像万马奔腾，极为壮观。它是亚洲最大的瀑布。

尼亚加拉瀑布：在北美尼亚加拉河上。尼亚加拉河从伊利湖流入安大略湖，于石灰岩—白云岩崖壁处陡落形成瀑布。落差 51 米，总宽约 1240 米，水流量达 6003 立方米/秒。是美洲各瀑布中水量最大的瀑布，气势磅礴，景象十分壮观。

安赫尔瀑布：世界最高瀑布。位于委内瑞拉东南部卡劳河源流丘伦河上。河水从奥扬特普伊山东缘沿陡壁跌落至丘伦河谷地，落差为 979 米。四周是群山密林，只能从空中看到。1935 年美国飞行员安赫尔发现了这个瀑布。为纪念安赫尔，瀑布从此得名。

伊瓜苏瀑布：世界最宽瀑布。位于阿根廷同巴西的界河伊瓜苏河下游，离伊瓜苏河与巴拉那河交汇点约 23 公里。伊瓜苏河在此从崖壁陡落入巴拉那河峡谷，形成 275 股急流和瀑布，洪水期连成一片。呈马蹄形，宽 4000 米，落差为 60-82 米。瀑布跌落的水声可在 20 公里远处听到，瀑布激起的水珠形成 30-150 米高的雾，在阳光下非常壮丽雄伟。

瀑布名	国家/地区	宽	落差	水流量	什么著名

This are the addition reference for you to learn more about the four waterfall we learn from this lesson

[NIAGARA FALLS \[Ontario, Canada/New York, USA\]](#)

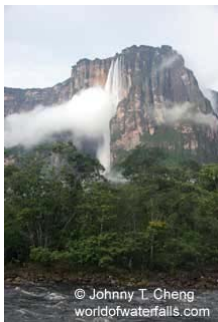

Easily the most famous waterfall in North America, this powerful waterfall also ranks as the biggest one by volume with a whopping average of about 750,000 gallons per second (2.8 million Liters per second)! In addition to its raw power, the falls is easily one of the easiest to access and view from all sorts of angles. While its surroundings are a bit less naturesque for many, it clearly makes the upper tier of our list of Top 10 Waterfalls.

[HUANGGUOSHU WATERFALL](#)

This is widely regarded as China's most famous waterfall as well as one of its biggest at 74m tall and 81m wide. It's got a classically squarish shape, and its character can go from thunderous wall of water to graceful parallel watery columns. Cascades both above and below the main plunge further add to its allure. Moreover, you can *gobehind* the waterfall and experience it in a way that few other waterfalls of this size would allow. Certainly it's one of our favorite Chinese waterfalls. You won't find any of the namesake yellow fruit trees here, but you will find lots of other people eagerly taking photos who also probably think this is their favorite Chinese waterfall, too!

[ANGEL FALLS \(SALTO ÁNGEL\) \[Canaima, Venezuela\]](#)

Plunging uninterrupted for 807m (with total drop of 979m) from a mystical tabletop mountain (tepuy) deep in a Venezuelan equatorial rainforest, it is widely acknowledged as the tallest permanent waterfall in the world. Its existence defies logic as its source is nothing but the soggy cloud forest on the plateau of the tepuy. No doubt about it, there's nothing like this waterfall and the adventure to even get to this so-called Lost World (Mundo Perdido) for a chance to see this world wonder is sure to leave you with a lasting impression.

[IGUAZU FALLS \(IGUASSU FALLS\) \[Puerto Iguazú, Argentina/Foz do Iguaçu, Brazil\]](#)

With its brink spanning a distance of an incredible 2km in its average flow of 1.3 million liters per second, this falls tops our list of favorites. The falls actually consists of some 275 individual waterfalls and cascades. Catwalks make it easy to get closeup and intimate views and the rainforest surroundings make the scenery feel right for a natural attraction such as this. Put it all together and we believe this falls is heads and shoulders above the rest (except Victoria Falls) that we've seen!
